

# CT scan reconstruction using machine learning

**Luuk Froling**

## **abstract**

This will be the abstract

## **Introduction**

This will be the introduction

## **Theory**

### **CT scans**

- brief overview of ct scans
- 

### **backprojection**

- brief overview backprojection
- list issues

### **itterative**

- brief overview iterative approach (with references to Mechlem)
- positives
- negatives

### **machine learning - CNN**

- How in image processing CNN have been used before

### **Attention**

- How we want to map the sinogram to the image, which is non-local (link attention is all you need)

A tutorial to evolve markdown documents and notebooks into structured data
